## **Symbion Systems Announces the Availability of its Second Generation Driver for Bruker Optics FTIR spectrometers**

TUSTIN, Calif., March 9, 2011 – Symbion Systems, Inc., a leader in providing analytical instrument control, analysis, and connectivity software, today announced the release of its SII-BRK02 Second Generation Driver for the Bruker Optics FTIR spectrometers. The new driver integrates all of the functions of the Bruker instruments into the Symbion-DX and RX analytical instrument software suites, providing a comprehensive capability for both laboratory development and on-line chemical process monitoring. The availability of the full range of Symbion functionality broadens the already substantial capability of the Bruker FTIR spectrometers by allowing them to operate as autonomous analytical systems provided with complete sample system control, database storage (including store and forward capability), and integral chemometric modeling and prediction.

Symbion-DX and RX provide standardized platforms for controlling a wide range of spectrometers and other analytical instruments. In addition, they feature extensive data manipulation and application development capabilities as well as the ability to communicate with numerous third party programs, and enterprise-wide data systems. In short, Symbion-DX and RX streamline the development of comprehensive analytical methods encompassing instrument and sample system control, data analysis, process trending, database archiving, and reporting to enterprise-wide data systems. Each method is permanently stored in the Symbion database and is under full version control, compliant with 21 CFR Part 11. Once validated, a method can be recalled from the database and downloaded for deployment at multiple instrumentation locations.

### About Symbion Systems, Inc.

Symbion Systems, Inc. was founded in 2002 to develop and market standardized instrument control and data management software for the analytical instrument and process analytical industries. The company's products are employed both by instruments manufacturers for instrument control and data handling and by end-users for integrating diverse functions in laboratory and process installations. In addition, Symbion

works closely with its sister company, Axiom Analytical, Inc. to develop and implement comprehensive hardware and software systems for on-line process analysis.
